

MEF EMC-FILTER 1-PHASE 2-STAGE

I:6A U:250 VAC/300 VDC snap on

Current: 6 A DIN-rail mountable

Attenuation curves on request.

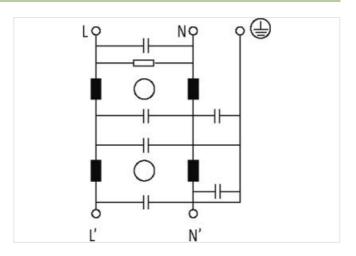

against symmetrical interferences

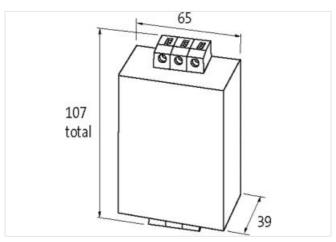

The single phase 2-stage EMC filters MEF 1/2 are used in the range 0.1...30 MHz to suppress cable carried interference on mains and control cables. The best filter performance is achieved by using short connection wires (suggestion: earth connection < 10 cm) and the largest possible diameter. The EMC filters work bi-directionally (in both directions). The filters are for demanding applications. The filters are designed for use with fixed modules. One step of the filter is always for the suppression of asymmetrical interferences (magnetically compensated suppression). The second step is, dependant on application for symmetrical or asymmetrical interferences.
